

The Two Faced Moon

I can only describe my book as a search for the truth. The Moon is one of the most beautiful sights in the night sky and is always there. Back in time the first astronomers pointed their simple telescopes at the Moon and started to document information of a world with many mysteries. It became apparent that our neighbour was alive and showed signs of volcanic activity and even clouds. When we finally reached the age of rockets we were able to get a closer look, first with probes and then with human beings. The Apollo missions brought to us the reality of a very dead world and one that had a very harsh environment. The Moon was soon forgotten. What if everything you were told was one great big lie. It does seem we might be facing the biggest untold story of the century. Evidence points to the Moon being well and truly alive, and visited not just by us. Just think if all the Apollo missions were just a show and secretly off camera and communications we were looking at evidence of intelligent life. I intend on opening the book of truth and reveal to you, The Two Faced Moon.
