

Solar Energy in Plain English!: DIY Home Solar Power Secrets Demystified For Beginners

About the Author: After witnessing first hand the horrors of economic collapse and martial law during his travels in the Third World, Edward Burrows decided that the only way to avoid being a victim when society breaks down and desperate hordes destroy the cities is to be energy independent and never again depend on big corporations or the government for any of his needs. This guide is the result of his years of research and hands-on experience with using solar energy to power all his familys energy needs. Are you ready to be energy independent and finally achieve the freedom of being off grid and not giving your money to the big energy companies? Then this guide is for you! Inside you will discover... * One of the first things you should look at when you buy a solar power system. * One of the best uses for a solar power system that few people know about. * Why not all roofs are equal when it comes to installing solar panels. * How many solar panels should you get? * What kind of inverters should you use? * How to prevent thieves from targeting your shiny new panels. * Simple ways to lower your energy costs when using solar energy. * A common mistake that can make your energy bills higher than expected. * How to meet all your power needs, even with power hogs like washing machines and microwaves. ...and many more solar energy secrets! .
